

Atellica Asa Application

siemens-healthineers.com/atellicsolution

The Atellica® portfolio includes the Atellica Asa™ Application, a tablet-based virtual assistant designed to simplify and organize operator interactions with Atellica® Solution analyzers.

The Atellica Asa Application gives operators a mobile interface to the components of the Atellica Solution that includes only the most common, yet critical, procedures needed to complete daily system operations.

This intuitive, tile-based software organizes operator tasks and reduces the number of screens used to complete a single task.

This application improves workflow by allowing the operator to walk away from the system with confidence and return to the Atellica Solution instruments only when indicated by Atellica Asa.

Empower your day with Atellica Asa, your trusted assistant.
